4. Open up your Hyper-V machine, either saved on your desktop or by searching in your start menu.

5. Head over to "Action" in the top left corner. Hover over "New" and select "Virtual Machine.."

<u>N</u>agios<sup>®</sup>

6. You are now given the virtual machine setup wizard.

7. Feel free to take the opportunity to name your virtual machine whatever you like. Here, we name ours "Nagios Hyper-V Template".

8. The next place we recommend you go is "Assign Memory" on the left hand side.

<u>N</u>agios<sup>®</sup>

9. The default will likely be 512 MB of startup memory. We recommend upping this to 2048 MB, which will equal 2 GB. This will boost your startup memory and still allow your machine to run well.

10. The next step would be configuring your network. This allows you to use a virtual switch if you like.

11. Select "Bridged" if you'd like to connect and configure a virtual switch. If you do not wish to do so, feel free to leave this option "Not Connected."

<u>N</u>agios<sup>®</sup>

12. The next step will be configuring your virtual hard disk.

13. Since you downloaded the VHD file from Nagios.com, you already have a virtual hard disk. Select "Use an existing virtual hard disk."

14. Click browse to find the VHD file on your computer.

### <u>N</u>agios<sup>®</sup>

15. Your VHD file should be found in your downloads folder. Click on the file and select "Open."

16.	Finally,	click "Fir	nish" to	comple	ete the se	tup
wiza	ard.

21. It will take a few seconds to complete the connection.

22. The Nagios XI login prompt will appear. You will see the login credentials in the upper right corner.

23. Type in "root" as the login. Hit ENTER on your keyboard.

# <u>N</u>agios

24. Type in "nagiosxi" as the password. You will not see the password appear. Hit ENTER on your keyboard.

25. If you type in the login credentials successfully, you should see "[root@localhost ~]#." Your IP Address will appear just below the Nagios XI banner. (It will be different than you see here.) Now head over to your favorite browser.

26. Type in your IP Address in your web browser. Again, it will be different than you see here so make sure you type yours in accurately. Hit ENTER on your keyboard.

27. Click on "Access Nagios XI" to start using Nagios XI.

28. For the Nagios XI installer you can change your settings such as your Administrator Name, Email Address and Password. Finally, if you're not in America's Eastern time zone, be sure to assign your time zone via the drop down menu. When done, click "Install".

29. If you changed your password, you should see that on this page. Be sure to copy the password or have it stored somewhere, as you'll be prompted to log in on the following page, using these credentials. Click "Login to Nagios XI."

Login to Nagios XI		

#### <u>N</u>agios<sup>®</sup>

30. Here is the login screen. Logging in is the final step before seeing the Nagios XI dashboard.

31. The username will be "nagiosadmin" and the password will be whatever you have set it to or, if you didn't change the password, the randomly generated password presented to you on the previous screen. If you are a non-English speaker, be sure to choose your language by clicking the appropriate flag below. The default setting is English. Click "Login" when done.

32. In order to access the Nagios XI Dashboard, you'll have to read the license agreement and click "Submit."
