# Nagios Network Analyzer

·Provide network traffic and bandwidth information for your entire IT infrastructure.

·Ensure that systems, applications, services, and business processes are functioning properly.

·In the event of a security threat or unexpected bandwidth spike, Nagios Network Analyzer can alert you of the problem, allowing you to begin remediation processes before outages affect business processes, end-users, or customers.

With Nagios Network Analyzer, organizations can stay one step ahead of security threats, maintain efficiency, and keep their networks running smoothly.

## Extensive Network Analysis

Gain an in-depth look at all network traffic sources and potential security threats allowing you to quickly gather high-level information regarding the health of your network as well as highly granular data for complete and thorough network analysis.

## Intuitive Design

With a powerful and intuitive web interface, Network Analyzer is easy-to-use, while providing optimal performance and speed.  Integrate it with our network monitoring solution, Nagios XI, for the consolidation of alerts and notifications. Easily setup alerts and add sources to be analyzed with Network Analyzer's intuitive wizards.

## Network Clarity

Network Analyzer provides a central view of your network traffic and bandwidth data as well as potential network compromises.  The powerful home dashboard provides an at-a-glance view of critical network flow data sources, server system metrics, and abnormal network behavior for quick assessment of network health.

## In-Depth Insight

Advanced alerting and reporting capabilities provide IT staff with superior awareness of their network. Highly granular, down-to-the-packet data can be accessed and archived for further tracking and analysis. When critical thresholds are exceeded, abnormal network activity occurs, or bandwidth restrictions are met, Network Analyzer can trigger alerts allowing admins to start resolving issues immediately.

# Adaptability

Create a Network Analyzer environment that reflects your network's identity. Source groups allow you to organize similar sources as well as apply views and queries to multiple sources simultaneously, and to your exact specifications. Additional add-on capabilities allow you to push SNMP notifications to monitoring and SNMP trap management systems. Network Analyzer adapts to your existing environment for a pain-free implementation process that takes only minutes to get up and running.

# Advanced User Management

The multi-tenant capabilities of the server and web interface allow users to view relevant infrastructure status while read-only access permissions can be specified to ensure system security ensuring that only administrators can make changes to Network Analyzer data and sources.

# Extendable Architecture

A fully accessible API provides simple integration with in-house and third-party applications for advanced customization and adaptation to your environment to meet your exact needs and specifications.
